Amendment to the Claims

Kindly add claim 16 as set forth below. In compliance with the Revised Amendment Format published in the Official Gazette on February 25, 2003, a complete listing of claims is provided herein.

1. (Previously Presented) A method for providing a set of software components for component-oriented software development, said method comprising:

providing a set of software components out of which a software application to be executed by an apparatus comprising processor means and memory means can be partly or entirely assembled;

assigning a different numeric identifier to each component of said set of software components; and

storing each assigned numeric identifier in the corresponding component.

- 2. (Original) The method of claim 1, wherein the numeric identifier comprises a bit-length of 8 or 16 bit.
- 3. (Previously Presented) The method of claim 1, further comprising loading two or more software components of said set of software components into said memory means of said apparatus, and storing said two or more software components therein.
 - 4. (Previously Presented) The method of claim 3, further comprising:

loading said software application into said apparatus and storing said software application in said memory means;

providing means for instantiating said loaded software components upon request of said software application;

DE919990078

loading said means for instantiating into said apparatus; and storing said means for instantiating in said memory means.

- 5. (Original) The method of claim 1, further comprising providing said apparatus with a full Java Virtual Machine being able to execute every Java instruction.
- 6. (Original) The method of claim 1, further comprising providing said apparatus with a limited Java Virtual Machine being able to execute only certain Java instructions.
- (Original) A system comprising means adapted for carrying out the steps of claim 7. 1.
- 8. (Original) A system comprising means adapted for carrying out the steps of claim 4.
- 9. (Original) A computer program product loadable into memory means of a digital computer, comprising software code for performing the steps of claim 1.
- 10. (Original) A computer program product loadable into memory means of a digital computer, comprising software code for performing the steps of claim 4.
- 11. (Previously Presented) A device comprising processor means and memory means, in which a set of software components is stored, said software components to be partly or entirely assembled into a software application to be executed by said device, wherein each of said software components comprises a different numeric identifier, proferably comprising a bitlength of 8 or 16 bits.
 - 12. (Original) The device of claim 11, further comprising:

a stored software application; and

means for instantiating said software components upon request of said software application.

- 13. (Previously Presented) The device of claim 11, wherein the device comprises at least one of a chip card, a Java Card, a set-top box and a Personal Digital Assistant.
- 14. (Previously Presented) The method of claim 1, wherein said set of software components is capable of at least one of being, subsequent to being partly or entirely assembled into said software application, updated by updating at least one software component of said set of software components and supplemented by adding at least one software component to said set of software components.
- 15. (Previously Presented) The device of claim 11, wherein said set of software components is capable of at least one of being, subsequent to being partly or entirely assembled into said software application, updated by updating at least one software component of said set of software components and supplemented by adding at least one software component to said set of software components.
 - 16. (New) The method of claim 1, further comprising:

providing said apparatus with a limited Java Virtual Machine being able to execute only a subset of Java instructions; and

accessing, by said apparatus, a full Java Virtual Machine residing at a computing unit coupled to said apparatus, said accessing allowing said apparatus to execute additional Java instructions.
